As the technology has advanced, wind turbines have gotten much quieter, but noise from wind turbines is still a public concern. The problems associated with wind turbine noise have been one of the more ...

This paper discusses various noise generation mechanisms in wind turbines and potential noise reduction techniques. Special emphasis has been laid on reviewing aerodynamic noise ...

Because wind turbines are such a great source of clean, renewable energy, they're usually greeted with a great deal of enthusiasm. But some ...

How loud are wind turbines? Modern wind turbines typically generate noise levels between 43 and 45 decibels (dB (A)) at a distance of 350 meters, a sound level often compared to a quiet ...

Standing under a wind turbine will expose you to sound levels around 100 decibels, but the noise levels quickly drop as you move away from the turbine. At a distance of a few hundred ...

One concern about wind turbines is that they are noisy, but the Department of Energy notes that at a distance of 750 feet, they make about as much noise as a household fridge.

Aerodynamic noise, often described as a "swishing" sound, is a factor of types of blades and speed of rotation. Wind ...

Do wind turbines cause noise pollution? Yes. While noise levels are moderate, wind turbine noise pollution can cause annoyance in rural settings ...
