Use WeatherPower graphics to show daily wind and solar electricity generation based on weather of the day and installed capacity in your area.

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

Estimated small scale solar photovoltaic generation and small scale solar photovoltaic capacity are based on data from Form EIA-861M, Form EIA-861 and from estimation methods ...

Table 1.1 shows the sources from which electricity can be generated in the U.S. Natural gas facilities make up a plurality of America's current generation capacity, followed by coal, wind, and solar ...

The presented wind and solar time series are proportional to wind and solar power generated, though they are provided in terms of cubic wind speed and irradiance, respectively.

How Much Sun Do You Get (Peak Sun Hours). Obviously, the more sun you get, the more kWh a solar panel will produce per day. We measure the amount of ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

Our methodology combines high-resolution data for land uses, slope, and hourly weather data with a thorough analysis of different factors for wind power, like hub heights and rotor diameters, ...
