-----

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest ...

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the ...

China's solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country's grid and climate trajectory.

Global Energy Monitor, which collected the data, says once smaller solar projects - such as panels on top of homes - are taken into account, China's total solar capacity is in fact ...

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 ...

China is miles ahead of the US (and everyone else) when it comes to solar and wind China added 318 Gigawatt (GW) of new solar capacity last year, along with 120 GW of ...

China is set to have more solar power capacity than coal for the first time this year, marking a "historic" milestone in the country's energy transition.

As of 2024, China was responsible for 64 percent of the world's utility-scale solar and wind construction, with 339 gigawatt hours ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to ...
