For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined ...

But when utilities, policymakers, and investors face decisions about which technology to deploy, the question often arises: which is better for electricity generation?

A new analysis of solar and wind power shows its generation worldwide has outpaced electricity demand this year.

Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates. This report uses data from the EIA to analyze solar and...

Here we present a strategy involving construction of 22,821 photovoltaic, onshore-wind, and offshore-wind plants in 192 countries worldwide to minimize the levelized cost of electricity.

The modelled meteorological variables were then used to calculate the potential future changes in wind power and solar photovoltaic power for electricity production for each climate ...

These charts show how renewables such as solar and wind will replace fossil fuels in power generation and which regions are leading the way ...

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax ...
