Wind energy has long been a cornerstone of the renewable energy sector, yet it faces increasing competition from solar power, supply chain ...

In our latest Short-Term Energy Outlook, we forecast that wind and solar energy will lead growth in U.S. power generation for the next two years.

The modelled meteorological variables were then used to calculate the potential future changes in wind power and solar photovoltaic power for electricity production for each climate ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated ...

Solar and wind are growing fast enough to meet all new electricity demand worldwide for the first three quarters of 2025, according to new data ...

Solar and wind energy have emerged as the dominant forces in the global renewable energy transition. Together, they account for nearly 90% of new power capacity additions worldwide.

Solar and wind power, among other renewable sources, are leading the charge toward a more sustainable future, but beyond these well-known ...

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax ...

The energy transition to wind and solar was decided before its practicality was tested. No place has found an increased reliance on wind ...

Does wind and solar power generation have a future

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...
