With 65 new or expanded solar and storage facilities having come online in 2025, the United States has surpassed 60 GW of domestic solar ...

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

The United States now has enough domestic module manufacturing capacity to meet its expected deployment. In Q3 2024, U.S. PV module production grew by 35% q/q and 146% y/y to ...

Domestic panel assembly supplies a relatively small proportion of domestic demand for solar panels. The domestic solar manufacturing industry employed around 31,000 workers in 2020, ...

The United States is undergoing a transformational buildout of domestic solar and storage manufacturing. Like other industries, the U.S. can and is breaking free from an overreliance on ...

Currently, the domestic PV manufacturing industry has the capacity to produce enough PV modules to meet U.S. demand, but there are gaps in the crystalline ...

This spreadsheet evaluates the domestic manufacturing capacity for each of the main components within the solar supply chain, using readily available data. The domestic supply rate is ...

In 2022, the U.S. produced a paltry 5 gigawatts of solar panels or modules, according to the National Renewable Energy Laboratory, while ...

The current US solar manufacturing ecosystem represents a comprehensive network of production capabilities that extends far beyond ...
