Wind and hydropower collectively contributed to over two-thirds of the total renewable electricity generation, representing 39.1% and 29.9%, ...

For renewable electricity production, onshore wind has the lowest average LCoE in 2024 (65 EUR/ MWh), ahead of hydropower (72 EUR/MWh) and off-shore wind (74 EUR/MWh), followed by power from large ...

Recent public opinion surveys about wind power at both the EU and the country level shows that wind energy, being a clean and renewable energy source, is ...

Wind and solar overtook fossil fuels in the European Union's power generation last year, a report has found, in a "major tipping point" for clean energy.

Europe now has 285 GW of wind power capacity, 248 GW onshore and 37 GW offshore. The EU-27 accounts for 231 GW of the total installed ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power. A ...

Solar power output in the EU more than tripled between 2014 and 2024, the report shows, with last year seeing coal generation overtaken for the first time. Meanwhile, wind generation ...

Wind and solar generated more EU electricity than fossil fuels in 2025, according to the European Electricity Review published today by think tank Ember. Wind and solar generated a ...

Wind and solar generated more electricity across the European Union than fossil fuels for the first time last year, according to Ember's newly ...
