According to Ookla's Q2 2025 analysis, the continent's 5G deployment remains alarmingly inconsistent, with dramatic gaps between the most and least connected nations--raising questions about ...

Employment of 5G in industrial settings in Europe has been behind expectations, and to date mostly limited to test sites. Although work began in 2015, 5G deployment is continuing across...

The GSMA's latest Mobile Economy Europe report has revealed that Europe continues to lag behind other advanced regions such as North America, ...

A significant number of 5G base stations (gNBs) and their backup energy storage systems (BESSs) are redundantly configured, possessing surplus capacity during non-peak traffic hours.

As of 2024, Germany had the most 5G base stations among European Union (EU) member states, with over ***** base stations installed.

Only a handful of countries -- including Spain, Czech Republic, Portugal, Greece, and Austria -- show signs of early 5G SA adoption, but even ...

The European 5G Observatory tracks progress in 5G infrastructure deployment across the EU and other regions worldwide according to base stations deployment, edge nodes and infrastructure sharing ...

The deployment and adoption of 5G SA in Europe remain sluggish, increasing slowly from a very low base and further widening the region's gap with North America and Asia.

The Finnish Transport and Communications Agency Traficom has revised its regulation on critical parts of communications networks. The revised regulation extends the scope of regulation ...
