Solar and battery storage are set to account for 79% of 86 GW of new utility-scale capacity planned in the United States in 2026, marking the largest annual increase in more than two decades ...

In Q2 2025, a record 5.6 gigawatts (GW) of new capacity came online, according to the latest US Energy Storage Monitor report from the ...

Utility-scale battery storage in the United States is poised to more than double over the next two years and will close out 2026 at nearly 65 GW -- ...

Globally, annual energy storage deployment (excluding pumped hydropower plants) is set to hit another all-time high at 92 gigawatts (247 gigawatt-hours) in 2025 - 23% higher than in 2024. ...

The US added a record-breaking amount of energy storage in 2025, according to a new solar industry report published Monday. The growth of battery storage across the US is a rare ...

In 2025, two-thirds of all utility-scale energy storage capacity was installed in states carried by President Donald Trump in the 2020 election, including nine of the top fifteen states for new ...

The U.S. energy storage industry installed a record-shattering 57.6 gigawatt-hours (GWh) of new capacity in 2025, the largest single year of new battery capacity additions on record. Despite ...

Renewables and storage are projected to account for 93% of all new utility-scale capacity this year. In contrast, natural gas developers plan to add only 6.3 GW of new capacity. With the 2026 ...

Generators added 10.4 GW of new battery storage capacity in 2024, the second-largest generating capacity addition after solar. Even though battery storage capacity is growing fast, in 2024 ...

How big is the scale of new energy storage

According to the report, U.S. storage will reach 87.8 GW by 2029, driven by residential and utility-scale segments amidst a ...
