How to match a substring in a string, ignoring case Asked 14 years, 7 months ago Modified 2 years, 10 months ago Viewed 290k times

How do I create a regular expression to match a word at the beginning of a string? We are looking to match stop at the beginning of a string and anything can follow it. For example, the ...

Although the match function doesn't accept string literals as regex patterns, you can use the constructor of the RegExp object and pass that to the String.match function:

You can match directly against the type of v, but you need a value pattern to refer to the types to match, as a "dotless" name is a capture pattern that matches any value.

This MATLAB function returns indices of the matching features in the two input feature sets.

Match case statement with multiple "or" conditions in each case Ask Question Asked 3 years, 2 months ago Modified 1 year, 6 months ago

index match returns 0 for blank cell, want it to be "-" Asked 8 years, 10 months ago Modified 2 years, 11 months ago Viewed 148k times

```
# Reset all tracked files to match the remote branch git reset --hard origin/main #replace with remote branch name # Remove all untracked files, directories, and gitignored files git clean -fdx ...
```

This MATLAB function returns the starting index of each substring of str that matches the character patterns specified by the regular expression.
