This function is used to check whether the inverter is properly grounded before the inverter starts, or check whether the ground cable is disconnected when the inverter is running.

When there is an issue, the inverter generates a corresponding solar inverter error code. However, this doesn't mean that your inverter is faulty; ...

This guide will help you decipher the common symbols, numbers, and messages you might encounter on a typical solar inverter display, ensuring ...

Assuming your L1/L2/N connections are correct to your home, and any other 240 VAC appliances are working correctly, the assumption is you have a failed ...

Grounding Indicates the position for connecting the protective earthing (PE) cable.

Your meter only looks at the L1 and L2 power in (and power out if you export power) by measuring the current and voltage on L1 and L2. The neutral current is not measured.

On occasion, when the AC1 has some load on it and the heat pump starts, I get to around 11-13kW output, which triggers the L1 overload warning. This happened when all my use was ...

SolarEdge systems issue warning messages that indicate specific operational statuses and system notifications. These messages are displayed on the inverter screen (if available on the specific device).
