The new operator uses the internal `[[Construct]]` method, and it basically does the following: Initializes a new native object Sets the internal `[[Prototype]]` of this object, pointing to the ...

In the specific case of `throw`, `throw new()` is a shorthand for `throw new Exception()`. The feature was introduced in `c# 9` and you can find the documentation as `Target-typed new` ...

Ah, but new experts will rise up and embrace the new, friendly Stack Overflow that they have always wanted. And maybe rediscover the same things the bitter, hateful old guard ...

Note that if you declared `it var a = new { }; and var o = new object();`, then there is one difference, former is assignable only to another similar anonymous object, while latter ...

`83 new()` describes a constructor signature in typescript. What that means is that it describes the shape of the constructor. For instance take `{new(): T; }`. You are right it is a type. It is the type ...

You should use `new` when you wish an object to remain in existence until you delete it. If you do not use `new` then the object will be destroyed when it goes out of scope.

The `new` keyword in JavaScript can be quite confusing when it is first encountered, as people tend to think that JavaScript is not an object-oriented programming language. What is it? What ...

It is NOT "bad" to use the `new` keyword. But if you forget it, you will be calling the object constructor as a regular function. If your constructor doesn't check its execution context then it ...

A new expression is the whole phrase that begins with `new`. So what do you call just the `"new"` part of it? If it's wrong to call that the `new` operator, then we should not call ...
