OverviewInfrastructurePower generationTransportationStandalone systemsDo it yourself communityPhotovoltaic arrays are often associated with buildings: either integrated into them, mounted on them or mounted nearby on the ground. Rooftop PV systems are most often retrofitted into existing buildings, usually mounted on top of the existing roof structure or on the existing walls. Alternatively, an array can be located separately from the building but connected by cable to supply power for the building. Building-integrated photovoltaics

PV systems can be very simple, consisting of just a PV module and load. However, depending on the system configuration, we can distinguish three main types of PV systems:
