When orienting solar panels, the rule of thumb for the northern hemisphere is that the optimal orientation for solar panels is true south. For ...

The general rule for solar panel placement in the northern hemisphere is that solar panels should face true south (and in the southern, true north). This is usually the best direction ...

For decades, the solar industry has operated on a simple principle: panels should face south to capture maximum sunlight. This made sense when ...

Explore why solar panels face south for optimal sun exposure. Learn the science behind positioning solar panels and maximize your energy.

When your panels face true south (that's 180 degrees on a compass, also called azimuth), they stay perpendicular to the sun's rays longer. Think of it like this: when sunlight hits your panels straight on, ...

Solar panels should face true south, not magnetic south. The difference between these directions, called magnetic declination, can vary by up ...

Facing solar panels due South is the standard for maximum energy harvesting because of the sun's predictable path across the sky. In the Northern Hemisphere, the sun travels along an arc that ...

Myth 1: Solar Panels Must Always Face South: While south-facing panels are generally the most efficient in the Northern Hemisphere, east or west-facing panels can still be effective ...

When considering solar energy for your home or business, one of the most common questions is whether solar panels must face south to be ...
