As the Trump administration's "Big, Beautiful Bill" eliminates many clean-energy incentives in the U.S., China continues huge investments in wind ...

Discover all statistics and data on Solar energy in China now on statista !

In short: China is installing record amounts of solar and wind, while scaling back once-ambitious plans for nuclear.

However, China still needs to turn the massive renewables buildup into power generation, replace fossil fuels, and reach the "tipping point" so as to ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

The massive buildout is happening across the country, from crowded eastern cities increasingly topped by rooftop solar panels to remote western ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's ...

Last year, a viral drone video from China's Guizhou province revealed an entire mountain range blanketed in solar panels stretching to the ...

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy ...

Real shot of solar power generation in China

solar powerSolar water heatingGovernment incentivesThe growth of solar power industries worldwide has been rapidly accelerated by the growth of the solar market in China. Chinese-produced photovoltaic cells have made the construction of new solar power projects much cheaper than in previous years. Domestic solar projects have also been heavily subsidized by the Chinese government, allowing for China's solar energy capacity to dramatically soar. As a result, they have become the leading country for solar energy, passing Germany's capacity in 20...
