OverviewBackgroundPolicies and lawsEconomicsHeating and hot waterPhotovoltaicsAlternatives to photovoltaicsFurther readingSolar power suits Turkey's climate, especially in the South Eastern Anatolia and Mediterranean regions. Solar power is a growing part of renewable energy in the country, with almost 25 gigawatts (GW) of solar panels in 2025, of which 22 GW is commercial and industry rather than traditional power companies or residential rooftop solar as in many other countries. It generates 6% of the country's electricity. Solar thermal

Turkey and Saudi Arabia have taken a major step in strengthening their economic and energy ties with the signing of a \$2 billion solar energy agreement. The deal was finalized during ...

Turkey ratified the Paris Agreement in 2021 and declared its intention to achieve the "net zero" target by 2053. The government announced a target of an increase of 1 gigawatt in solar photovoltaic and ...

Turkey is promoting rooftop solar systems as part of efforts to expand decentralized renewable energy use and widen public participation in the energy transition.

With abundant sunshine and cutting-edge innovations in solar technologies, Turkey is ready to harness the full potential of solar energy to promote energy security ...

Turkey's renewable energy potential is shaped by its diverse geographical and climatic conditions, enabling access to an array of resources, including solar, wind, hydropower, geothermal, ...

This study examines the recent development of solar and wind energy capacities in Turkey in the context of current renewable energy targets and strategies.

By scaling up solar and wind power, Turkey aims to decarbonize its electricity grid, reduce its environmental footprint, and contribute meaningfully to global climate efforts.

Solar energy for the environment turkey

Studies on the utilization of solar energy gained momentum especially after the 1970s, solar energy systems showed a technological progress and a decrease in cost, and established itself as an ...

Our country is fortunate compared to many countries in terms of its solar energy potential due to its geographical location. Turkey is located in the sun belt, so it ...
