-----

NLR's solar energy research includes next-generation solar technologies for national security applications and emerging industries as well as photovoltaic performance, reliability, and ...

NASA scientists and other researchers around the world are working to improve the efficiency and durability of solar panels. In addition to using silicon, scientists have discovered that ...

In the new nature paper, a team of researchers at the energy ...

But a team of scientists in Australia is working on a way to fix that problem by developing a novel type of solar panel that could work at night. It's a sort of solar panel in reverse, which...

A space solar power prototype has demonstrated its ability to wirelessly beam power through space and direct a detectable amount of energy ...

By manipulating the quantum fabric of materials to create new kinds of photoelectric responses, scientists are redefining what solar power can be. ...

Researchers have taken a small but necessary step toward realizing a long-standing dream: harvesting solar energy in space and beaming it down to ...

In August 2024, scientists in the Oxford University Physics Department developed an approach aimed at generating more power from limited surface area, a strategy that could reduce the land...

Researchers discovered a new way organic molecules can mimic the quantum mechanics of inorganic materials, turning light into electricity with ...
