U.S. energy storage surges in 2025, creating potential new grid, construction, and manufacturing opportunities as demand for reliable power soars.

The following resources provide information on a broad range of storage technologies.

The global battery industry has been gaining momentum over the last few years, and investments in battery storage and power grids were ...

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state and ...

In this article, I'll walk you through all the important battery energy storage system statistics, where it started, how much it has grown, which ...

The U.S. energy storage industry installed a record-shattering 57.6 GWh of new capacity in 2025, the largest year of new additions on record.

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

The U.S. has 431 operational battery energy storage projects, 8 using lead-acid, lithium-ion, nickel-based, sodium-based, and flow batteries. 10 These projects totaled 27 GW of rated power in 2024, 8 ...

While early adopters continue leading in deployment, activity across the country shows clear demand for

Statistics of power grid energy storage projects

utility-scale ...
