---

The TDK aluminum electrolytic capacitors feature outstanding ripple current capabilities and very long-term reliability. Design flexibility and ...

We produce a wide range of capacitors that deliver exceptional performance and reliability while standing up to demanding conditions. We seek to continually ...

Mouser offers inventory, pricing, & datasheets for Aluminum Electrolytic Capacitors.

The aluminum electrolytic capacitor is composed of an anode foil, a cathode foil and separator paper which are wound together and impregnated with an electrolyte.

The thin insulating layer of aluminum oxide formed on the anode between the foil plates acts as the dielectric, creating a high-capacitance device in a compact package.

Aluminum electrolytic capacitors have the feature of high capacitance per unit volume and lower cost per capacitance compared with other capacitors and are mainly used for smoothing power supply.

The NPCAPTM is a Conductive Polymer Solid Aluminum Capacitor that uses highly conductive polymer electrolytic material. Please read the following in order to get the most out of your NPCAPTM capacitor.

These capacitors come in a wide range of capacitance values (0.1uF to 82,000uF) and voltage ratings (2VDC to 550VDC), offering different performance levels of ...
