In 2025 there was just 2 GW of battery storage capacity installed, but by 2023 this grew to 89 GW - an increase of 4,350%, the UN report says. The ...

One of the most ambitious solar projects in history is quietly heading for shutdown after just a decade of operation. The Ivanpah Solar Power Facility ...

End-of-life management for photovoltaics (PV) refers to the processes that occur when solar panels and other components of a PV system (racking, inverters, ...

In July 2021 China announced plans to install over 30 GW of energy storage by 2025 (excluding pumped-storage hydropower), a more than three-fold increase on its installed capacity as of 2022.

The more solar and wind plants the world installs to wean grids off fossil fuels, the more urgently it needs mature, cost-effective technologies that ...

As renewable energy generation continues to grow, the use of battery energy storage systems (BESS) in solar farms has become increasingly ...

The US added a record-breaking amount of energy storage in 2025, according to a new solar industry report published Monday. The growth of battery storage across the US is a rare ...

Solar and battery storage are set to account for 79% of 86 GW of new utility-scale capacity planned in the United States in 2026, marking the largest annual increase in more than two decades ...

In this study, a preliminary list of drivers, barriers, and enablers to end-of-life management of photovoltaic panels and battery energy storage systems obtained from a systematic literature ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery

The End of Solar Energy Storage

storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...
