Globally, China's clean energy boom is reshaping markets: the country makes 80% of the world's solar panels and 60% of its wind turbines, ...

Explore China's massive solar megaprojects. Learn how gigawatt-scale photovoltaic farms in remote regions are reshaping the global energy landscape.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we ...

By the first quarter of 2024, China's total utility-scale solar and wind capacity reached 758 GW, though data from China Electricity Council put the ...

We comprehensively evaluate concentrated solar power (CSP) potential in China across four dimensions: geographical, technical, economic, and CO2 mitigation, and extend the analysis ...

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentivesChina is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. By June 2025, China's PV capacity surpassed 1,100 gigawatt. In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative installed solar capacity.

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic ...

The Trump administration has rolled back environmental protections and blocked green energy development, China is forging ahead.

This review further proposes a strategic roadmap for sustainable development, emphasizing the integrated

Who will develop solar power in China

deployment of wind and solar as the dominant sources of power generation.

Alongside wind and solar, the country will orderly advance major hydropower projects, actively and safely develop nuclear power, and improve ...
